

Dryopteris marginalis

Marginal Wood Fern (NATIVE)

Price : \$18.00

Price includes 6% MD sales tax

Exposure Part Shade, Full Shade

Height 18" - 24"

Spread 12" - 24"

Spacing 24"

Bloom Color Non-flowering

Bloom time Non-flowering

Deer Resistant Yes

USDA Hardiness Zone 5 - 8

Description

Dryopteris marginalis (Eastern Wood Fern) has thick, leathery leaves that stay green over winter, providing year round interest. This is a woodland fern which is most often found in shaded crevices of rocky ledges and bluffs. Excellent for stabilizing dry shaded slopes of the woodland, rock, native plant or wild garden. Rhizome forms an erect crown. Evergreen fronds provide good interest to the winter landscape and forms a lovely, easy to maintain groundcover. Mixes well with spring wildflowers, purple-leaved heucheras and hostas and is drought tolerant. Excellent as a specimen or in groups.
